## **Rokmaster Outlines Advancements Planned for Revel Ridge**

**Vancouver, April 12, 2023** – Rokmaster Resources Corp. (TSXV: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or “the Company”) is pleased to announce that engineering work by Ausenco Services Pty Ltd. to update the preliminary economic assessment (“PEA”) on the Revel Ridge Project (“Revel Ridge” or “the Project”) is advancing well and that the PEA will also incorporate an updated mineral resource estimate (“MRE”) on the Project.

The Company is also pleased to announce that the 2023 drill program on Revel Ridge will commence shortly, and will include multiple drill targets designed to return to areas where the successful 2022 exploration program defined enhanced mineralization in the Revel Ridge Main Zone (“RRMZ”).

### *Southeastern Extension*

To explore for additional resources using wide step-outs, Rokmaster will drill to test the area between the down-dip extension of the 2022 channel sampling and the Zinc Creek Showing in the 2023 drill program ([Figure 1](#)).

### *Northwestern Extension*

A new zone of strong RRMZ (developed on a favourable contact) was discovered in 2022 after targeting deeper portions of the RRMZ below drillholes completed earlier in 2021. The new zone is highlighted by drillholes RR22-102a and RR22-101 in [Figure 1](#). Drilling is planned to further test this area in the 2023 drill program.

### *Depth Extension*

The recognition that the RRMZ is fundamentally a unique orogenic gold system that has significant potential at depth has allowed Rokmaster to complete broad-spaced drilling to consistently intersect the RRMZ during previous drill programs. Coarse visible gold mineralization was discovered in some of the deeper drillholes completed by Rokmaster, which has important metallurgical and geological implications (see [press release dated June 7, 2021](#)). Drill targets will investigate deeper regions of the deposit where favourable structural, lithological, and particulate gold features are indicated.

John Mirko, President and CEO, comments, “The team soundly advanced the Revel Ridge Project in 2022 by continuing the strategy of rapid resource expansion. We aim to maintain this approach with the 2023 drill program set to begin soon and following on the success of past programs.

The deposit remains open in all directions and Rokmaster will continue pushing the envelope of the mineralized volume of the RRMZ with the potential to discover exciting new zones of Yellowjacket or coarse gold mineralization.

We are looking forward to the results of the updates to the MRE and the PEA and will release the results as soon as available.”

The technical information in this news release has been prepared in accordance with Canadian regulatory requirements as set out in National Instrument 43-101 and reviewed and approved by Eric Titley, P.Geol., who is independent of Rokmaster and who acts as Rokmaster’s Qualified Person.

## **About Rokmaster**

Rokmaster’s flagship Revel Ridge Project is host to a high-grade gold and polymetallic orogenic sulphide deposit which has been the subject of a PEA Technical Report dated December 8, 2020, and a Technical Report of an Updated NI 43-101 Mineral Resource Estimate<sup>1</sup> on the Revel Ridge Property, dated January 17, 2022. The 2023 drill program is designed to efficiently expand the volume of the Revel Ridge Main Zone as defined by the updated Mineral Resource Estimate, which currently remains open in all directions:

- Measured & Indicated (M&I): **1.36 million** gold equivalent (“AuEq”) Measured & Indicated (M&I) ounces contained within 6.73 million tonnes with an average grade of 6.27 g/t AuEq.
- Inferred (Inf): **1.22 million** AuEq ounces contained within 6.00 million tonnes at an average grade of 6.33 g/t AuEq.
